

In the Claims:

1     1.     (Currently amended) A multi-layer laminate comprising a  
2           plurality of successively stacked layers of respective  
3           organic-inorganic composite materials, wherein:

4                 each of said organic-inorganic composite materials is  
5                 respectively produced by polycondensating a metal alkoxide  
6                 of a metal element through hydrolysis until a remaining  
7                 unreacted amount of said metal alkoxide is reduced to no  
8                 more than 3 vol.%, and then mixing an organic polymer with  
9                 at least said metal alkoxide that has been polycondensated;  
10                ~~polycondensated with an organic polymer;~~

11                said layers respectively have different concentrations  
12                of ~~[[a]]~~ said metal element in ~~said metal alkoxide of~~ said  
13                respective organic-inorganic composite material, such that  
14                said laminate has a concentration gradient with a varying  
15                concentration of said metal element through a thickness of  
16                said laminate from a first side to a second side of said  
17                laminate.

1     2.     (Original) The multi-layer laminate according to claim 1,  
2           wherein said laminate has a refractive index gradient with  
3           a varying refractive index through said thickness of said  
4           laminate.

1     3.     (Original) The multi-layer laminate according to claim 2,  
2           wherein said refractive index varies opposite said  
3           concentration.

1 4. (Original) The multi-layer laminate according to claim 3,  
2 wherein said concentration of said metal element increases  
3 monotonously through said thickness from said first side to  
4 said second side, and said refractive index decreases  
5 monotonously from said first side to said second side.

1 5. (Original) The multi-layer laminate according to claim 3,  
2 wherein said concentration of said metal element first  
3 increases and then decreases in succession through said  
4 thickness from said first side to said second side, and  
5 said refractive index first decreases and then increases in  
6 succession through said thickness from said first side to  
7 said second side.

1 6. (Original) The multi-layer laminate according to claim 3,  
2 wherein said concentration of said metal element first  
3 decreases and then increases in succession through said  
4 thickness from said first side to said second side, and  
5 said refractive index first increases and then decreases in  
6 succession through said thickness from said first side to  
7 said second side.

1 7. (Original) The multi-layer laminate according to claim 1,  
2 wherein said concentration of said metal element increases  
3 monotonously through said thickness from said first side to  
4 said second side.

1 8. (Original) The multi-layer laminate according to claim 1,  
2 wherein said concentration of said metal element first  
3 increases and then decreases in succession through said  
4 thickness from said first side to said second side.

1 9. (Original) The multi-layer laminate according to claim 1,  
2 wherein said concentration of said metal element first  
3 decreases and then increases in succession through said  
4 thickness from said first side to said second side.

1 10. (Original) The multi-layer laminate according to claim 1,  
2 wherein said metal alkoxide is one of Si alkoxide, Ti  
3 alkoxide, and Zr alkoxide.

1 11. (Original) The multi-layer laminate according to claim 1,  
2 wherein said organic-inorganic composite materials  
3 respectively have an optical transmittance of at least 90%  
4 per 10 $\mu$ m thickness of said organic-inorganic materials for  
5 light having a wavelength of 600 to 1000nm.

1 12. (Original) The multi-layer laminate according to claim 1,  
2 wherein said organic-inorganic composite materials  
3 respectively have an overall content of said metal element  
4 in a range from 0.1 to 46 wt.%.

1 13. (Original) The multi-layer laminate according to claim 12,  
2 wherein said overall content of said metal element is in a  
3 range from 5 to 37 wt.%.

4     **14.**   (Original) The multi-layer laminate according to claim 1,  
5            wherein said organic-inorganic composite materials are made  
6            up of organic domains and inorganic domains, wherein said  
7            organic domains and said inorganic domains have domain  
8            sizes not more than 0.1 $\mu$ m.

1     **15.**   (Original) The multi-layer laminate according to claim 1,  
2            comprising at least seven of said layers.

Claims **16 to 27** (Canceled).
